

The new UniverZuil

The UniverZuil is the perfect solution to collect visitors' passes in a controlled and automatic way, especially now that the column has been improved on the inside and outside.

The UniverZuil is capable of collecting even more passes than before. The new modular construction allows you to determine the appearance of the UniverZuil because each panel can be finished in any colour or with the foil imprint of your choice.

The stainless steel card collectors are available in different models and types. There are indoor and outdoor models, and single and double types, to accommodate trucks. The new UniverZuil is compatible with almost any access control system. The card collector can be fitted with a card reader and intercom / camera devices.
